

PCOS Diet Plan (Overweight | Diabetic) (Vegetarian)

Low-GI, Anti-Inflammatory Diet for Hormonal Balance | Diabetic-Friendly

Core Dietary Principles

- Focus on low-glycemic index (GI) foods — choose whole grains, millets, and legumes over refined carbs.
- Include high-fibre vegetables, lean proteins, and healthy fats (nuts, seeds, avocado) at every meal.
- Avoid sugar, refined flour (maida), sugary beverages, and processed snacks that spike insulin levels.
- Add anti-inflammatory spices daily: turmeric, cinnamon, ginger, and fenugreek.
- Drink 8-10 glasses of water, herbal teas, and fenugreek seed water throughout the day.
- Eat small, frequent meals every 3-4 hours. Limit dairy and red meat.
- Strictly avoid sugar, jaggery, honey, and all sweeteners. Use stevia if needed.
- Monitor carbohydrate intake carefully. Stick to measured portions of grains at each meal.
- Include bitter melon (karela), fenugreek, and cinnamon daily to help manage blood sugar.
- Never skip meals. Eat at fixed times every 3-4 hours to prevent blood sugar spikes.
- Follow a calorie deficit of 300-500 kcal/day. Reduce grain portions by 25%.
- Fill half your plate with non-starchy vegetables at every meal.
- Limit rice to 1 cup per day. Prefer 2 rotis with extra vegetables instead.

7-Day Meal Plan

Day 1 (Monday)			
Breakfast: Moong dal cheela (2) + mint chutney + 1 cup green tea	Lunch: 1 cup brown rice + ½ cup rajma + cucumber salad	Snack: Roasted makhana (1 cup) + 1 apple	Dinner: 2 jowar roti + ½ cup lauki sabzi + ½ cup dal
