

Postnatal Diet Plan (Overweight | Diabetic) (Vegetarian)

Nutrient-Rich Diet for Post-Delivery Recovery & Breastfeeding Support | Diabetic-Friendly

Core Dietary Principles

- Focus on iron-rich and calcium-rich foods to replenish nutrients lost during delivery and support lactation.
- Include galactagogues daily: fenugreek (methi), fennel seeds (saunf), oats, garlic, and gond laddoo.
- Eat 5-6 small meals daily with adequate protein and healthy fats for breastfeeding energy needs.
- Stay well-hydrated with 10-12 glasses of water, coconut water, buttermilk, and herbal teas daily.
- Prefer warm, easily digestible foods like khichdi, soups, dalia, and porridge in the early weeks.
- Avoid cold foods, gas-forming foods (cabbage, cauliflower), raw salads, and spicy/oily foods initially.
- Strictly avoid sugar, jaggery, honey, and all sweeteners. Use stevia if needed.
- Monitor carbohydrate intake carefully. Stick to measured portions of grains at each meal.
- Include bitter melon (karela), fenugreek, and cinnamon daily to help manage blood sugar.
- Never skip meals. Eat at fixed times every 3-4 hours to prevent blood sugar spikes.
- Follow a calorie deficit of 300-500 kcal/day. Reduce grain portions by 25%.
- Fill half your plate with non-starchy vegetables at every meal.
- Limit rice to 1 cup per day. Prefer 2 rotis with extra vegetables instead.

7-Day Meal Plan

Day 1 (Monday)			
Breakfast: Ragi porridge + 1 tbsp ghee + 5 soaked almonds + dates	Lunch: 2 roti + ½ cup lauki chana dal + ½ cup curd + salad	Snack: 1 cup fenugreek tea + 1 gond laddoo + 1 banana	Dinner: 1 cup moong dal khichdi + ghee + ½ cup raita
