

Pregnancy Diet Plan (Overweight | Diabetic) (Non-Vegetarian)

Nutrient-Dense Diet for Maternal Health & Fetal Development | Diabetic-Friendly

Core Dietary Principles

- Ensure adequate folate, iron, calcium, protein, and DHA for healthy fetal brain and spine development.
- Eat small, frequent meals every 2-3 hours to manage nausea, heartburn, and maintain stable energy.
- Pair iron-rich foods (green leafy veg, lentils, beetroot) with vitamin C (lemon, amla) for absorption.
- Stay hydrated with 8-10 glasses of water, coconut water, buttermilk, and fresh fruit juices daily.
- Avoid raw/undercooked meats, raw eggs, unpasteurized dairy, excess caffeine, and alcohol completely.
- Take prescribed prenatal supplements (folic acid, iron, calcium, DHA) as advised by your doctor.
- Strictly avoid sugar, jaggery, honey, and all sweeteners. Use stevia if needed.
- Monitor carbohydrate intake carefully. Stick to measured portions of grains at each meal.
- Include bitter melon (karela), fenugreek, and cinnamon daily to help manage blood sugar.
- Never skip meals. Eat at fixed times every 3-4 hours to prevent blood sugar spikes.
- Follow a calorie deficit of 300-500 kcal/day. Reduce grain portions by 25%.
- Fill half your plate with non-starchy vegetables at every meal.
- Limit rice to 1 cup per day. Prefer 2 rotis with extra vegetables instead.

7-Day Meal Plan

Day 1 (Monday)			
Breakfast: 2 boiled eggs + 1 slice brown toast + 1 glass milk	Lunch: 2 roti + fish curry (100g) + ½ cup sabzi + salad	Snack: 1 banana + 5 almonds + 1 glass buttermilk	Dinner: 1 cup brown rice + ½ cup dal + raita
