

Weight Loss Diet Plan (Overweight | Diabetic) (Non-Vegetarian)

High-Protein, Low-Carb Diet for Healthy Fat Loss | Diabetic-Friendly

Core Dietary Principles

- Create a moderate calorie deficit (1200-1500 kcal/day) while maintaining protein to preserve muscle mass.
- Include lean protein at every meal — dal, paneer, soya, chicken, fish, eggs — to boost metabolism.
- Replace refined carbs with complex carbs: brown rice, quinoa, millets, whole wheat, high-fibre veggies.
- Avoid sugar, sugary drinks, packaged snacks, fried foods, and all refined flour products completely.
- Drink 8-10 glasses of water daily including 1 glass before meals to reduce overeating.
- Eat every 3-4 hours with portion control. Dinner should be the lightest meal, 2 hours before bed.
- Strictly avoid sugar, jaggery, honey, and all sweeteners. Use stevia if needed.
- Monitor carbohydrate intake carefully. Stick to measured portions of grains at each meal.
- Include bitter melon (karela), fenugreek, and cinnamon daily to help manage blood sugar.
- Never skip meals. Eat at fixed times every 3-4 hours to prevent blood sugar spikes.
- Follow a calorie deficit of 300-500 kcal/day. Reduce grain portions by 25%.
- Fill half your plate with non-starchy vegetables at every meal.
- Limit rice to 1 cup per day. Prefer 2 rotis with extra vegetables instead.

7-Day Meal Plan

Day 1 (Monday)			
Breakfast: 2 boiled eggs + 1 slice brown toast + green tea	Lunch: Grilled chicken (100g) + 1 cup brown rice + cucumber salad	Snack: 1 cup roasted makhana + green tea	Dinner: 2 jowar roti + ½ cup lauki sabzi + 1 boiled egg
